Fluff collector

Lint or Fluff collector is used to separate lint from wastewater. It is placed behind the washer and acts as a filter to prevent the drainpipe from becoming clogged, which could lead to flooding in the laundry room. These collectors are made in stainless steel for highest durability and have removable strainer plates for easy cleaning. Available in difference sizes such as: 25, 45, 75 and 100 liters. The size of the collector should be in line with the washer capacity.

<p>0W21DH 9029791861</p>	<p>Dryer balls for tumble dryers Dryer balls with nodes designed to physically break down the stiffness created by water drying in fabric, thus softening laundry without the introduction of toxic chemicals. The two balls have different tensile strengths (one is harder than the other) with different shaped softening nodes. Square nodes compress and soften fabric while round nodes relax fibers to reduce hardness. They work in combination to lift and separate the laundry whilst tumble drying. They also retain the heat and transfer it to the clothes as they tumble, aiding the drying process.</p> <p>Qty: 2</p>
